

Spotlight on melanoma

Australia has the highest rate of melanoma in the world.

It is also the 3rd most commonly diagnosed cancer in Australia, and every year, approximately:

- 17,000 Australians are diagnosed with melanoma, and
- 1,400 Australians lose their life to melanoma.

By 2030 the number of melanoma survivors is expected to increase by 83% to 348,000 Australians.

That's why we're calling on the government to implement our five-point action plan.

Together we can shine a spotlight on melanoma to ensure no one walks alone

melanomapatients.org.au

FIVE POINT ACTION PLAN

1 Invest in a national melanoma telehealth support program

2 Implement a national melanoma nurse support service

3 Ensure early diagnosis of all melanomas

4 Improve speed and equity of access to all melanoma treatments and clinical trials

5 Develop and invest in a 10-year nationally harmonised skin cancer prevention program
